Harrison, NJ

Professional Summary

- Java Full Stack Developer with around **9+ years of experience** in Enterprise Applications, Distributed Systems, Client/Server Applications, software development, testing, deployment, and implementation.
- Extensive experience in all phases of the **Software Development Life Cycle (SDLC)** including requirements gathering, analysis, design, development, testing, deployment, and production support using Agile methodologies.
- Strong experience in developing scalable backend applications using **Java 8/17, J2EE, Spring Boot, Spring MVC, Spring Data JPA, Hibernate, JDBC, Microservices**, and RESTful APIs.
- Designed and developed Microservices architecture using **Spring Boot**, ensuring modularity, scalability, maintainability, and high application performance.
- Experience in building and maintaining responsive web applications using **Angular 15, Angular 17, ReactJS, Redux, Redux-Saga, HTML5, CSS3, Bootstrap, JavaScript, TypeScript, Node.js, jQuery, XML, and JSON**.
- Developed modern User Interfaces using **ReactJS** and **Angular**, integrating frontend applications with REST APIs and Microservices.
- Experience with **Flux Architecture, Redux, and Redux-Saga** for state management in React applications.
- Upgraded and adapted enterprise applications to leverage the latest features and performance enhancements introduced in **JDK 17**.
- Developed RESTful Web Services using **JAX-RS** and implemented SOAP-based Web Services using **JAX-WS, SOAP, WSDL, UDDI**, and SOA architecture.
- Experience exposing enterprise services using **IBM DataPower** and **Apigee Edge API Gateway** by creating API proxies and implementing secure API management solutions.
- Developed dynamic routing mechanisms and customized API policies using **Node.js** within the Apigee Edge ecosystem.
- Hands-on experience integrating frontend applications with REST APIs built on Spring Boot Microservices.
- Experience developing enterprise applications using **Oracle ADF, Oracle JET, Oracle OA Framework (OAF), and Oracle Utilities Application Framework (OUAF)**.
- Implemented Oracle JET UI components for Commerce and Configuration modules.
- Strong experience working with databases including **Oracle 12c, PostgreSQL, SQL Server, MySQL**, and writing optimized SQL queries, PL/SQL Stored Procedures, Functions, Packages, and Triggers.
- Experience performing Unit Testing and Integration Testing using **Postman** and **SOAP UI**.
- Proficient in implementing logging and monitoring using **Apache Log4j** and **Logback**.
- Experience working with application servers including **Apache Tomcat, Oracle WebLogic, JBoss, and IBM WebSphere**.
- Good knowledge of cloud technologies with exposure to **Amazon Web Services (AWS)** and cloud-based application deployment.
- Experience using build and deployment tools including **Maven, ANT, Jenkins**, and deploying EAR/JAR applications across multiple environments.
- Hands-on experience using version control systems including **Git** and **SVN**.
- Experience using project management and defect tracking tools including **JIRA** and **ALM** for sprint planning, defect tracking, and quality assurance activities.

- Participated in code reviews, release management, deployment activities, and established development standards to improve code quality and maintainability.
- Enforced coding standards and best practices across development teams, improving consistency, readability, and code review efficiency.

- Strong knowledge of Java 8 features including **Lambda Expressions, Functional Interfaces, Streams API, and Parallel Streams**.
- Excellent analytical, problem-solving, communication, and interpersonal skills with experience collaborating effectively with clients, stakeholders, QA teams, and senior management.
- Self-motivated, adaptable, and quick learner with proven ability to deliver high-quality enterprise software solutions under tight deadlines.

Technical Skills

- **Programming Languages:** Java 8/11/17, SQL, PL/SQL, JavaScript (ES6+), TypeScript, UNIX Shell Scripting
- **Java Technologies:** Spring Boot, Spring Framework, Spring MVC, Spring Security, Spring Data JPA, Hibernate ORM, JDBC, REST APIs, SOAP Web Services, Microservices, JAX-RS (Jersey), JMS, SOA, OAuth 2.0, JWT, Design Patterns
- **Frontend Technologies:** ReactJS, Redux Toolkit, HTML5, CSS3, Bootstrap, JavaScript (ES6+), TypeScript, jQuery, AJAX, JSON
- **Databases:** Oracle 11g/19c, MongoDB, Apache Cassandra
- **Cloud & DevOps:** AWS (EC2, EKS, RDS, S3, IAM, CloudWatch), Docker, Kubernetes, Terraform, Ansible
- **Messaging Technologies:** Apache Kafka, IBM MQ, JMS
- **Build & CI/CD Tools:** Maven, Jenkins, GitHub Actions, SonarQube, Nexus
- **Version Control:** GitHub, Git, Apache Subversion (SVN)
- **Testing Tools:** JUnit 5, Mockito, Spring Boot Test, Selenium WebDriver, Postman
- **API Documentation & Monitoring:** OpenAPI (Swagger), Splunk, Grafana, Prometheus, Log4j2, Logback
- **Web & Application Servers:** Apache Tomcat, Oracle WebLogic, JBoss, IBM WebSphere Application Server
- **Development Tools / IDEs:** IntelliJ IDEA, Eclipse IDE, Visual Studio Code
- **Methodologies:** Agile Scrum, Kanban, Waterfall, SDLC
- **Project Management Tools:** Jira
- **Platforms:** Windows, Linux, UNIX, macOS

Professional Experience

Goldman Sachs
Senior Software Engineer
Present

New York, NY
April 2025 -

Responsibilities:

- Gathered business requirements from stakeholders and participated in **Agile** ceremonies including Sprint Planning, Daily Stand-ups, Backlog Grooming, Sprint Reviews, Retrospectives, estimation, and collaborative code reviews to deliver high-quality software solutions.
- Designed and developed scalable enterprise applications using **Java 17, Spring Boot**, and **Microservices** architecture, leveraging Streams, **Lambda Expressions**, Collections Framework, Exception Handling, Multithreading, and Completable Future to implement high-performance business logic.
- Developed secure **RESTful APIs** using **Spring Boot, Spring MVC**, and **Spring Data JPA**, enabling seamless integration with internal applications and third-party financial services.
- Built responsive Single Page Applications (SPA) using **ReactJS, Redux Toolkit, HTML5, CSS3, JavaScript (ES6+)**, and TypeScript, implementing reusable components, client-side routing, and asynchronous API integration.
- Developed and maintained backend services using **Spring Boot, Hibernate**, and **Spring Data JPA**, implementing business logic, transaction management, and efficient database persistence.
- Designed and optimized **Oracle 19c** database objects including **SQL** queries, Stored Procedures, Functions, Views, Indexes, and performance tuning to support high-volume financial applications.
- Developed and maintained **MongoDB** collections and repositories for storing semi-structured

application data such as audit logs, user preferences, and application analytics.

- Implemented **Apache Kafka** for asynchronous messaging and event-driven communication between distributed microservices to improve scalability and system reliability.
- Containerized applications using **Docker** and deployed microservices on **Kubernetes**, utilizing rolling deployments, health checks, service discovery, and auto-scaling to support cloud-native architecture.
- Deployed, configured, and maintained enterprise applications on **AWS EC2, EKS, RDS, and S3**, while utilizing CloudWatch for monitoring and performance optimization.
- Automated Continuous Integration and Continuous Deployment (**CI/CD**) pipelines using **Jenkins, GitHub Actions, Maven, SonarQube, and Nexus**, improving build automation, code quality, and deployment efficiency.
- Implemented application security using **Spring Security, OAuth 2.0, and JWT** to secure REST APIs with authentication, authorization, and role-based access control.
- Developed comprehensive unit and integration test cases using **JUnit 5, Mockito, and Spring Boot Test**, ensuring high code quality, regression coverage, and application reliability.
- Configured centralized logging and monitoring using **Log4j2, Splunk, Grafana, and Prometheus** to monitor application health, troubleshoot production issues, and improve system observability.
- Collaborated with business analysts, QA engineers, DevOps teams, and product owners using **GitHub, Jira, and Agile Scrum** methodologies to deliver scalable, high-quality software releases.
- Prepared technical documentation including API specifications using **OpenAPI (Swagger)**, architecture diagrams, sequence diagrams, deployment documentation, and participated in UAT, production releases, and post-production support.

Environment: Java 17, Spring Boot, Spring MVC, Spring Security, Spring Data JPA, Hibernate, Microservices, REST APIs, ReactJS, Redux Toolkit, TypeScript, HTML5, CSS3, JavaScript (ES6+), Oracle 19c, SQL, PL/SQL, MongoDB, Apache Kafka, Docker, Kubernetes, AWS (EC2, EKS, RDS, S3, CloudWatch), Maven, Jenkins, GitHub, GitHub Actions, SonarQube, Nexus, JUnit 5, Mockito, Spring Boot Test, Log4j2, Splunk, Grafana, Prometheus, OpenAPI (Swagger), Jira, Agile Scrum.

DaVita Health Care
Senior Software Engineer
2025

Denver, Colorado
June 2023 - March

Responsibilities:

- Gathered business requirements from stakeholders and collaborated with cross-functional teams to analyse, design, develop, and deliver scalable healthcare applications following Agile Scrum methodologies, including Sprint Planning, Daily Stand-ups, Sprint Reviews, Retrospectives, Backlog Refinement, estimation, and code reviews.
- Designed and developed scalable enterprise applications using Java 17, Spring Boot, Spring MVC, and Microservices architecture, implementing business logic with Streams, Lambda Expressions, Collections Framework, Exception Handling, Multithreading, and CompletableFuture.
- Developed secure RESTful APIs using Spring Boot, Spring MVC, and Spring Data JPA, enabling seamless communication between frontend applications, backend services, and third-party healthcare systems.
- Implemented Spring Security, OAuth 2.0, and JWT for secure authentication, authorization, and role-based access control to protect sensitive healthcare data.
- Developed responsive Single Page Applications (SPA) using ReactJS, Redux Toolkit, TypeScript, HTML5, CSS3, and JavaScript (ES6+), creating reusable components and integrating REST APIs for dynamic user experiences.
- Developed responsive Single Page Applications using Angular 12, TypeScript, RxJS, Angular Material, Reactive Forms, and REST API integration.
- Developed backend services using Spring Boot, Hibernate, and Spring Data JPA, implementing business logic, transaction management, and optimized database persistence.
- Designed and optimized Oracle 19c database objects including SQL queries, Stored Procedures, Functions, Packages, Views, Indexes, and performance tuning to support high-volume healthcare applications.
- Developed and maintained MongoDB collections and repositories for storing semi-structured application data and implemented Apache Cassandra for scalable storage of high-volume patient activity and audit information.
- Implemented Apache Kafka for asynchronous messaging and event-driven communication between distributed microservices to improve scalability, reliability, and system performance.

- Containerized applications using Docker and deployed microservices on Kubernetes, implementing rolling deployments, auto-scaling, health checks, and service discovery to support cloud-native environments.
- Worked with AWS services including EC2, S3, IAM, RDS, and CloudWatch to deploy, secure, monitor, and maintain scalable enterprise healthcare applications.
- Automated Continuous Integration and Continuous Deployment (CI/CD) pipelines using Jenkins, GitHub Actions, Maven, SonarQube, and Nexus, improving build automation, code quality, and release efficiency.
- Developed comprehensive unit and integration test cases using JUnit 5, Mockito, and Spring Boot Test, increasing application reliability, regression coverage, and overall code quality.
- Configured centralized logging and monitoring using Log4j2, Splunk, Grafana, and Prometheus, enabling proactive monitoring, troubleshooting, and production performance analysis.
- Utilized GitHub for source code management, implementing Git Flow branching strategies, pull requests, peer code reviews, and release management within Agile development teams.
- Prepared technical documentation including API specifications using OpenAPI (Swagger), architecture diagrams, sequence diagrams, deployment documentation, and participated in integration testing, UAT, production releases, and post-production support.
- Collaborated closely with business analysts, QA engineers, DevOps teams, product owners, and healthcare stakeholders to deliver secure, scalable, high-quality enterprise healthcare solutions while ensuring compliance with coding standards and best practices.

Environment: Java 17, Spring Boot, Spring MVC, Spring Security, Spring Data JPA, Hibernate, Microservices, REST APIs, OAuth 2.0, JWT, ReactJS, Angular, Redux Toolkit, TypeScript, HTML5, CSS3, JavaScript (ES6+), Oracle 19c, SQL, PL/SQL, MongoDB, Apache Cassandra, Apache Kafka, Docker, Kubernetes, AWS (EC2, S3, IAM, RDS, CloudWatch), Maven, Jenkins, GitHub, GitHub Actions, SonarQube, Nexus, JUnit 5, Mockito, Spring Boot Test, Log4j2, Splunk, Grafana, Prometheus, OpenAPI (Swagger), Jira, Agile Scrum.

Morgan Stanley
Software Engineer
2023

New York, NY
September 2021 - May

Responsibilities:

- Participated in all phases of the Software Development Life Cycle (SDLC), including requirements analysis, design, development, testing, deployment, code reviews, and Agile Scrum ceremonies using Jira to deliver scalable enterprise financial applications.
- Designed and developed enterprise applications using Java 11, Spring Boot, Spring Framework, Spring Data JPA, and Hibernate, leveraging Lambda Expressions, Streams API, Functional Interfaces, Optional, Multithreading, and the Java Date and Time API to implement robust business logic.
- Developed scalable RESTful APIs and Microservices using Spring Boot, Spring MVC, and Spring Data JPA, enabling secure integration with internal systems and third-party financial services.
- Implemented Spring Security, OAuth 2.0, and JWT to secure REST APIs with authentication, authorization, and role-based access control for enterprise applications.
- Developed responsive Single Page Applications (SPAs) using ReactJS, Redux Toolkit, HTML5, CSS3, Bootstrap, JavaScript (ES6+), and TypeScript, creating reusable components and integrating REST APIs for dynamic user experiences.
- Built reusable React components using Hooks, Context API, Redux Toolkit, React Router, and Axios to improve application performance, maintainability, and state management.
- Developed backend services using Spring Boot, Hibernate, and Spring Data JPA, implementing business logic, transaction management, and efficient database persistence.
- Designed and optimized Oracle 19c database objects including SQL queries, Stored Procedures, Functions, Packages, Views, Indexes, and performance tuning while utilizing MongoDB for storing semi-structured application data.
- Implemented Apache Kafka for asynchronous messaging and event-driven communication between distributed microservices, improving scalability and fault tolerance.
- Containerized microservices using Docker and deployed applications on Kubernetes,

implementing rolling deployments, auto-scaling, service discovery, and health monitoring for cloud-native environments.

- Worked with AWS services including EC2, RDS, S3, IAM, and CloudWatch to deploy, monitor, and maintain secure, highly available enterprise applications.
- Developed Infrastructure as Code (IaC) solutions using Terraform to automate cloud infrastructure provisioning and environment configuration across Development, QA, UAT, and Production environments.
- Automated Continuous Integration and Continuous Deployment (CI/CD) pipelines using Jenkins, Maven, GitHub, SonarQube, and Nexus, improving build automation, code quality, and deployment efficiency.
- Developed comprehensive unit and integration test cases using JUnit 5, Mockito, Spring Boot Test, and Selenium WebDriver, improving code quality, regression coverage, and application reliability.
- Configured centralized logging and monitoring using Log4j2, Splunk, and OpenAPI (Swagger) for application diagnostics, API documentation, performance monitoring, and production support.
- Collaborated with business analysts, QA engineers, DevOps teams, and product owners in Agile Scrum environments while participating in production releases, troubleshooting, technical documentation, UAT, and post-production support.

Environment: Java 11, Spring Boot, Spring Framework, Spring MVC, Spring Security, Spring Data JPA, Hibernate, Microservices, REST APIs, OAuth 2.0, JWT, ReactJS, Redux Toolkit, React Router, TypeScript, HTML5, CSS3, Bootstrap, JavaScript (ES6+), Oracle 19c, SQL, PL/SQL, MongoDB, Apache Kafka, Docker, Kubernetes, AWS (EC2, RDS, S3, IAM, CloudWatch), Terraform, Maven, Jenkins, GitHub, SonarQube, Nexus, JUnit 5, Mockito, Spring Boot Test, Selenium WebDriver, Log4j2, Splunk, OpenAPI (Swagger), Jira, Agile Scrum.

Big Lots
Software Engineer
2021

Columbus, Ohio
January 2020 - August

Responsibilities:

- Participated in all phases of the Software Development Life Cycle (SDLC), including requirements analysis, design, development, integration, testing, deployment, production support, code reviews, and Agile Scrum ceremonies while preparing UML artifacts such as Class Diagrams, Sequence Diagrams, and Activity Diagrams.
- Developed enterprise applications using Java 8, object-oriented programming principles, Collections Framework, Lambda Expressions, Exception Handling, Multithreading, JDBC, and design patterns including Singleton, DAO, Factory, Business Delegate, and MVC architecture.
- Designed and developed scalable web applications using Spring Boot, Spring MVC, Spring Data JPA, and Hibernate, implementing Controllers, Interceptors, Validation, Dependency Injection, and Transaction Management to support enterprise retail applications.
- Developed secure RESTful APIs and Microservices using Spring Boot, Spring MVC, Spring Data JPA, and JSON, enabling seamless communication between frontend applications and backend services.
- Developed responsive Single Page Applications (SPAs) using ReactJS, Redux, HTML5, CSS3, JavaScript (ES6+), Bootstrap, and jQuery, building reusable components and integrating REST APIs to deliver dynamic user experiences.
- Implemented Spring Security, OAuth 2.0, and JWT for authentication, authorization, and secure access to enterprise RESTful services.
- Developed backend business services using Spring Boot, Hibernate, and Spring Data JPA, implementing efficient CRUD operations, transaction management, and optimized database persistence.
- Designed and optimized Oracle 19c database objects including SQL queries, Stored Procedures, Functions, Packages, Views, Indexes, and PL/SQL scripts to support high-volume retail transactions.
- Developed asynchronous messaging solutions using Spring JMS integrated with IBM MQ, and implemented scheduled batch processing using Quartz Scheduler to automate business operations.
- Containerized applications using Docker and collaborated with DevOps teams to deploy and maintain microservices in cloud environments, improving scalability and deployment consistency.
- Worked with AWS services including EC2, S3, RDS, and CloudWatch while utilizing Ansible to

automate application deployment, server provisioning, and configuration management.

- Automated Continuous Integration and Continuous Deployment (CI/CD) pipelines using Jenkins, Maven, GitHub, and SonarQube, improving build automation, code quality, and release management.
- Developed unit and integration test cases using JUnit 5, Mockito, and Spring Boot Test, ensuring high code quality, regression coverage, and application reliability.
- Configured centralized logging and monitoring using Log4j2, while documenting REST APIs using OpenAPI (Swagger) to support troubleshooting, diagnostics, and API integration.
- Utilized GitHub for source code management, implementing Git Flow branching strategies, pull requests, peer code reviews, and collaborative software development in Agile environments.
- Collaborated with business analysts, QA engineers, DevOps teams, and product owners to deliver scalable, secure, and high-performance retail applications while participating in UAT, production releases, technical documentation, and post-production support.

Environment: Java 8, Spring Boot, Spring Framework, Spring MVC, Spring Security, Spring Data JPA, Hibernate, Microservices, REST APIs, OAuth 2.0, JWT, ReactJS, Redux, HTML5, CSS3, JavaScript (ES6+), Bootstrap, jQuery, Oracle 19c, SQL, PL/SQL, Spring JMS, IBM MQ, Docker, AWS (EC2, S3, RDS, CloudWatch), Ansible, Maven, Jenkins, GitHub, SonarQube, JUnit 5, Mockito, Spring Boot Test, Log4j2, OpenAPI (Swagger), Quartz Scheduler, UML, Jira, Agile Scrum.

App Labs
India
Software Engineer
2019

Hyderabad,

July 2016 - November

Responsibilities:

- Gathered business requirements from clients and participated in project planning, estimation, and execution following both Waterfall and Agile methodologies, including Sprint Planning, Daily Stand-ups, Sprint Reviews, Retrospectives, and collaborative code reviews.
- Developed enterprise applications using Core Java 8, leveraging Object-Oriented Programming (OOP), Collections Framework, Generics, Exception Handling, Multithreading, File I/O, JDBC, Lambda Expressions, and Streams API to implement scalable business logic.
- Developed enterprise web applications following the Model-View-Controller (MVC) architecture using Spring MVC, JSP, JSTL, JavaBeans, HTML5, CSS3, JavaScript, jQuery, and AJAX to build responsive user interfaces with client-side validations.
- Designed and developed responsive HTML email templates using HTML, CSS, and JavaScript to support business notifications and customer communication.
- Developed RESTful Web Services using Jersey (JAX-RS) and integrated third-party SOAP Web Services using the Spring Framework to support enterprise system integration.
- Designed and optimized Oracle 11g database objects including SQL queries, Stored Procedures, Functions, Triggers, Views, Packages, and PL/SQL scripts to support business-critical applications.
- Developed database access components using Spring JDBC, Hibernate ORM, JDBC Prepared Statements, Callable Statements, Stored Procedures, and efficient transaction management for Oracle databases.
- Utilized Hibernate ORM with the Spring Framework for object-relational mapping, persistence, lazy loading, and optimized database performance.
- Managed project dependencies using Maven and utilized Apache Subversion (SVN) for source code management, version control, branching, and release management.
- Worked with Jenkins Continuous Integration pipelines to automate application builds, deployments, and build verification, improving software delivery efficiency.
- Deployed, configured, and maintained enterprise applications on Apache Tomcat Server, performing application deployment, server configuration, performance tuning, and production support.
- Developed comprehensive unit and integration test cases using JUnit, improving code quality, regression coverage, and application reliability while utilizing Log4j for application logging, debugging, and exception tracking.
- Developed asynchronous client-server interactions using AJAX, JSON, and jQuery to improve application responsiveness and user experience.
- Prepared technical documentation including use case specifications, UML Class Diagrams, Sequence Diagrams, Activity Diagrams, and participated in integration testing, bug fixing, User Acceptance Testing (UAT), and production support.
- Collaborated with business analysts, QA engineers, database administrators, and development teams throughout the Software Development Life Cycle to deliver high-quality enterprise

applications following coding standards and best practices.

- Participated in code reviews, application maintenance, production issue resolution, performance optimization, and continuous application enhancements to ensure system stability and customer satisfaction.

Environment: Java 8, J2EE, Spring Framework, Spring MVC, Spring JDBC, Hibernate ORM, RESTful Web Services, SOAP Web Services, Jersey (JAX-RS), JDBC, JSP, JSTL, JavaBeans, HTML5, CSS3, JavaScript, jQuery, AJAX, JSON, Oracle 11g, SQL, PL/SQL, Maven, Jenkins, Apache Tomcat, Eclipse IDE, JUnit, Log4j, Apache Subversion (SVN), UML, SOA, Agile Scrum, Waterfall.
